Dottorato di Ricerca in Bioingegneria e Bioinformatica

Semantics based applications with biomedical big data

Kim Hong-Gee

Director of the Biomedical Knowledge
Engineering (BIKE) Laboratory
Seoul National University

**Lunedì 23/06/2014
ore 16.00 - 17.00**

Aula seminari

(ex-dipartimento di Informatica e Sistemistica)

Semantic Web is an effort to realize a Web of Data by interlinking data spaces with standard technologies such as RDF and ontologies.

In this seminar, I will firstly overview how semantic technologies deal with the big data problems from the linked data perspective.

Secondly, I will address how unstructured clinical documents (especially in the form of EMR data) can be structured, interchanged, and managed in a semantic way.

Finally, I will present the issues and examples of how heterogeneous biological data sets can be interlinked for data-driven scientific research.

I dottorandi e gli interessati sono caldamente invitati a partecipare

Organizzatore

Prof.ssa S. Quaglini

Coordinatore del dottorato

Prof. R. Bellazzi
