The Role of Biomechanics for Treatment and Prevention of Cardiovascular Diseases in Africa

Cardiovascular diseases (CVD) will become the leading cause of death by 2020 superseding infectious diseases such as HIV, tuberculosis and malaria. In Africa, a dramatic increase in CVD incidences, predominantly in children, is expected in the near future in conjunction with the emergence of a new epidemic of obesity, diabetes and uncontrolled hypertension, partially based on improvement of socio-economic conditions and adoption of a western diet. Efficient and affordable strategies for treatment and prevention of CVD are urgently needed. With the trend to therapies based on regenerative medicine, multi-disciplinary approaches are increasingly required. The importance of biomechanics in many of these approaches, alongside cellular bioengineering and advanced biomaterials, is only emerging. This talk will address challenges of biomechanics in treatment of cardiovascular diseases, such as acute myocardial infarction, vascular diseases and rheumatic heart disease, with particular reference to the African situation.

Dr. Thomas Franz

**Cardiovascular Biomechanics Lab, Chris Barnard Division of Cardiothoracic Surgery,
University of Cape Town, South Africa
Centre for High Performance Computing, Rosebank, South Africa**

Tuesday 28 June, 10.00

**MS1 Conference Room,
Department of Structural Mechanics,
Via Ferrata,1 – Pavia**
